

DANISH LANDRACE

THE TRADITIONAL DANISH BREED

Originally known for its high fertility, the Landrace has proved its excellency and shown great results in many other ways, both in nucleuses for purebred production and in the crossbreeding program.

The Landrace is one of the parents when producing the crossbred Danish Hybrid LY/YL - the other parent being the Danish Yorkshire.

Landrace sows are robust, they have great mothering abilities, high fertility, and an optimal growth rate. They provide excellent meat quality, and many viable piglets.

Available for purchase:

- Purebred Landrace breeding animals
- Landrace semen - fresh or frozen
